Architecture / Approach

Field → Control → Edge → Cloud

Closed-loop energy optimization for a 30 kW variable-demand water pumping station

- ### 01 APPROACH
- 01** Replace valve throttling with VFD speed control.
 - 02** Use pump affinity / cube-law behavior: $P \propto N^3$.
 - 03** Calibrate savings against the actual system curve: static head + friction head.
 - 04** Continuously: SENSE → CONTROL → VISUALIZE → ANALYZE → OPTIMIZE → ACT → LEARN

VALUE
DELIVERED

~46%
ENERGY REDUCTION

0.58 → 0.31
kWh/m³ SEC
SPECIFIC ENERGY CONSUMPTION

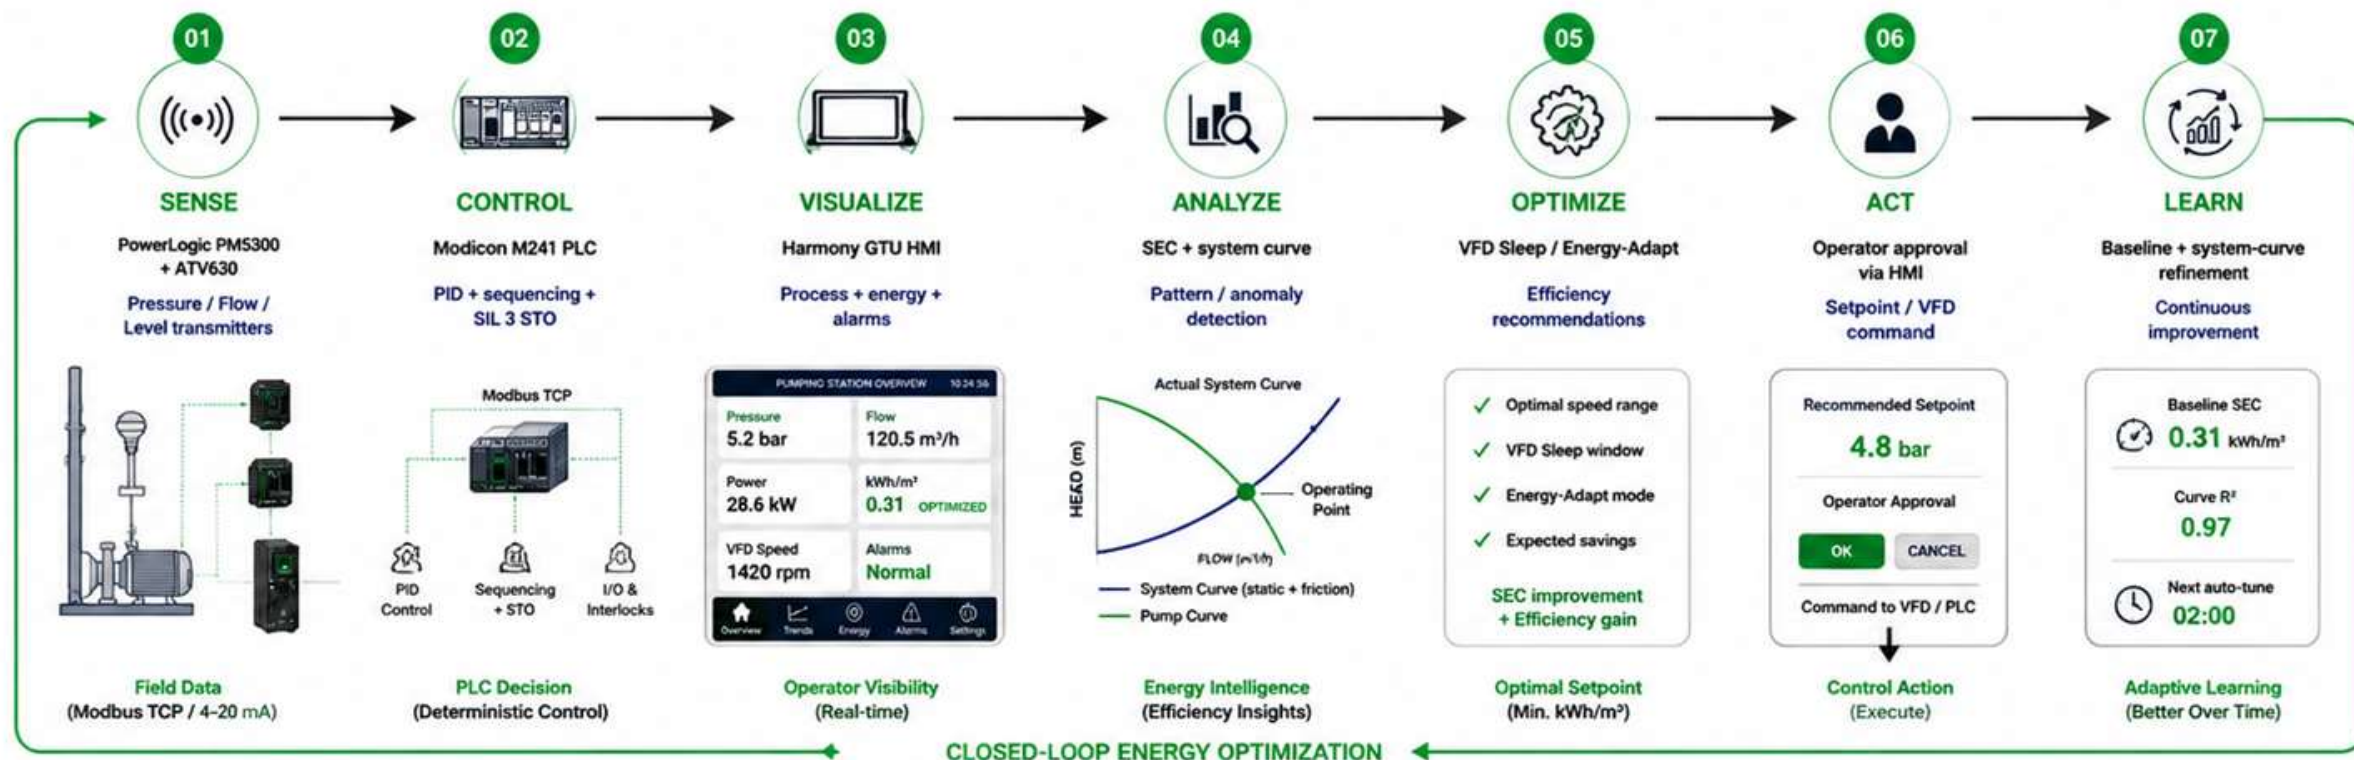

₹4-6
LAKH / YEAR
ENERGY SAVED

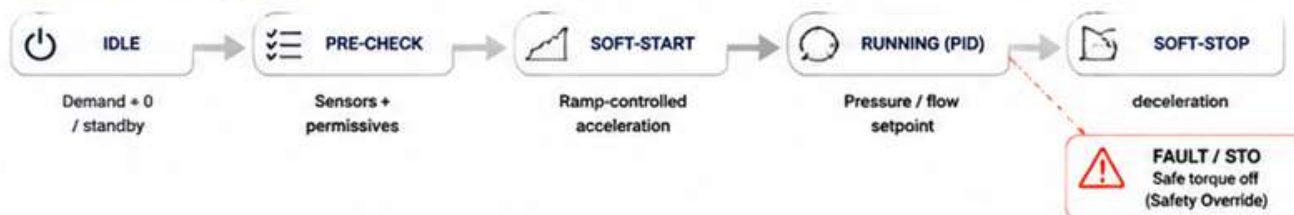

< 2 YEARS
PAYBACK

Tools used

SCHNEIDER HARDWARE

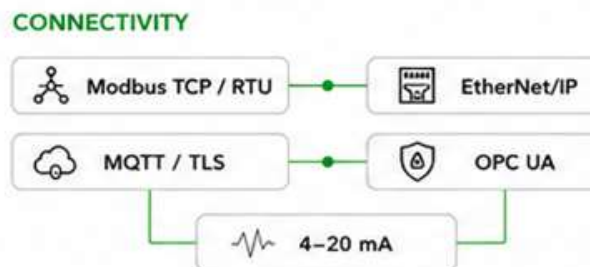

- MODICON M241**
PLC • IEC 61131-3
 - HARMONY GTU**
HMI • ISA-101
 - ALTIVAR PROCESS ATV630**
VFD • Sleep Mode • Energy-Adapt • STO
 - POWERLOGIC PM5300**
Energy Meter
 - ACTI9 iEM3155**
Sub-meter
 - PRESSURE / FLOW / LEVEL**
Transmitters
 - CONNEXIUM**
Managed Ethernet Switch
- Sensors → M241 PLC → ATV630 VFD → Motor / Pump

SOFTWARE & COMMUNICATION

- ### CONTROL & ENGINEERING
- EcoStruxure Machine Expert**
IEC 61131-3: ST / FBD / SFC / LD
 - Vijeo Designer / Operator**
Terminal Expert (HMI)

- ### EDGE & CLOUD
- EcoStruxure Machine Advisor**
IoT / Cloud
 - Node-RED**
 - Grafana**
 - Raspberry Pi / ESP32**
Prototype / Edge

STANDARDS & ENGINEERING
